POWDER TECHNOLOGY

www.elsevier.com/locate/powtec

Subject Index of Volume 104

Acceleration
An analytical study of the motion of a sphere rolling down a smooth inclined plane in an incompressible Newtonian fluid, 130
Annealing-evolution algorithm
An inverse technique devised from modification of annealing-evolution algorithm for particle sizing by light scattering, 80
Attrition
Attrition control by pneumatic conveying, 214

Ball-milling
Critical rotation speed for ball-milling, 95
Bed-load
Role of the interface in stratified slurry flow, 221
Bulk solid materials
Material properties and flow modes in pneumatic conveying, 157

Cake filtration
Using mechatronics technology to assess pressure filtration, 121
Capsule flow
An experimental investigation of capsules of anomalous shape conveyed by liquid in a pipe, 207
Capsule/pipe position
An experimental investigation of capsules of anomalous shape conveyed by liquid in a pipe, 207
Capsule trains
An experimental investigation of capsules of anomalous shape conveyed by liquid in a pipe, 207
Centrifugal motion
Critical rotation speed for ball-milling, 95
Chlorination
Recycling of carbon-enriched coal fly ash, 190
Circulating fluidized bed
On-line monitoring of dense phase flow using real time dielectric imaging, 287
Coal fly ash
Recycling of carbon-enriched coal fly ash, 190
Coal slurries
On the fully developed flow of a dense particulate mixture in a pipe, 258
Coating structure
Analysis of microstructure of coating suspensions, 50
Cohesion
The intrinsic cohesion of granular materials, 29
Comminution
Attrition control by pneumatic conveying, 214
Compressibility
Using mechatronics technology to assess pressure filtration, 121
Constant inlet pressure conditions
Optimal performance of pneumatic transport systems, 240
Constant solids throughput
Optimal performance of pneumatic transport systems, 240

Continuum mechanics
On the fully developed flow of a dense particulate mixture in a pipe, 258
Control
On-line monitoring of dense phase flow using real time dielectric imaging, 287
Couette flows
Analysis of microstructure of coating suspensions, 50
Critical rotation speed
Critical rotation speed for ball-milling, 95
Cyclone feed slurry pumps
Design, selection, sizing and control considerations for cyclone feed slurry pumps, 233

Dense phase conveying
On-line monitoring of dense phase flow using real time dielectric imaging, 287
Deposition
Role of the interface in stratified slurry flow, 221
Design
Design, selection, sizing and control considerations for cyclone feed slurry pumps, 233
Discharge
The intrinsic cohesion of granular materials, 29
Discrete particle simulation
Discrete particle simulation of flow regimes in bulk solids mixing and conveying, 248
Dispersive stress
Solids transport by laminar Newtonian flows, 269
Drag
An analytical study of the motion of a sphere rolling down a smooth inclined plane in an incompressible Newtonian fluid, 130
Dry grinding
Microstructural investigation of $CaTiO_3$ formed mechanochemically by dry grinding of a $CaO–TiO_2$ mixture, 75

Electrical capacitance tomography
On-line monitoring of dense phase flow using real time dielectric imaging, 287
Electrical disintegration
Liberation of minerals by high-voltage electrical pulses, 37
Elongation ratio
2-D particle shape averaging and comparison using Fourier descriptors, 180
Experimental data
An experimental study of vertical pneumatic conveying, 139

Filter design
Using mechatronics technology to assess pressure filtration, 121
Flow modes
Material properties and flow modes in pneumatic conveying, 157

Elsevier Science S.A.
PII: S0032-5910(99)00191-6

Flow resistance
Discrete particle simulation of flow regimes in bulk solids mixing and conveying, 248
Flow structure
An investigation of the flow structure through abrupt enlargement of circular pipe, 296
Fourier coefficients
2-D particle shape averaging and comparison using Fourier descriptors, 180
Freight-pipelines
Role of the interface in stratified slurry flow, 221
Friction
The influence of granular vortex motion on the volumetric performance of enclosed screw conveyors, 56
Role of the interface in stratified slurry flow, 221

Gas–solid
An experimental study of vertical pneumatic conveying, 139
Gas–solids flow
Discrete particle simulation of flow regimes in bulk solids mixing and conveying, 248
Granular flow
The intrinsic cohesion of granular materials, 29
Gravity
Rheology of solid–liquid suspensions in reduced gravity, 151
Gravity flow
Discrete particle simulation of flow regimes in bulk solids mixing and conveying, 248
Grinding
A comparative experimental study of five multivariable control strategies applied to a grinding plant, 1

Heat transfer
On-line monitoring of dense phase flow using real time dielectric imaging, 287
High-speed steel
Microstructures and properties of tungsten carbide particle-reinforced high-speed composites fabricated by spray forming, 100
Hopper
The intrinsic cohesion of granular materials, 29

Icosahedral ordering
Analysis of microstructure of coating suspensions, 50
Inclined plane
An analytical study of the motion of a sphere rolling down a smooth inclined plane in an incompressible Newtonian fluid, 130
Interfacial characteristics
Influence of physical and interfacial characteristics on the wetting and spreading of fluids on powders, 68
Inverse light scattering
An inverse technique devised from modification of annealing-evolution algorithm for particle sizing by light scattering, 80

Laminar flow
Laminar and turbulent flow experiments with yield-power law slurries, 200
Solids transport by laminar Newtonian flows, 269
Large capacities
Pneumatic conveying of powders over long distances and at large capacities, 278
Lattice Boltzmann simulations
Analysis of microstructure of coating suspensions, 50
Liberation
Liberation of minerals by high-voltage electrical pulses, 37
Long distances
Pneumatic conveying of powders over long distances and at large capacities, 278

Mathematical model
The intrinsic cohesion of granular materials, 29
Mean shape
2-D particle shape averaging and comparison using Fourier descriptors, 180
Mechatronics
Using mechatronics technology to assess pressure filtration, 121
Mercury intrusion
Estimating particle size distributions from a network model of porous media, 169
Microcrystal
Microstructural investigation of $CaTiO_3$ formed mechanochemically by dry grinding of a $CaO–TiO_2$ mixture, 75
Micronization
Micronization of pharmaceutical substances in a spiral jet mill, 113
Microstructure
Microstructural investigation of $CaTiO_3$ formed mechanochemically by dry grinding of a $CaO–TiO_2$ mixture, 75
Microstructure of particles
Analysis of microstructure of coating suspensions, 50
Mineral industry
A comparative experimental study of five multivariable control strategies applied to a grinding plant, 1
Minerals
Liberation of minerals by high-voltage electrical pulses, 37
Multiphase pipe flow
On the fully developed flow of a dense particulate mixture in a pipe, 258
Multivariable control
A comparative experimental study of five multivariable control strategies applied to a grinding plant, 1

Network model
Estimating particle size distributions from a network model of porous media, 169
Newtonian slurries
Solids transport by laminar Newtonian flows, 269

Orientation
2-D particle shape averaging and comparison using Fourier descriptors, 180

Particle
Discrete particle simulation of flow regimes in bulk solids mixing and conveying, 248
Particle shape
2-D particle shape averaging and comparison using Fourier descriptors, 180
Particle size
Estimating particle size distributions from a network model of porous media, 169
Particle size distribution
An inverse technique devised from modification of annealing-evolution algorithm for particle sizing by light scattering, 80
Particulate solids
Discrete particle simulation of flow regimes in bulk solids mixing and conveying, 248
Permeability
Influence of physical and interfacial characteristics on the wetting and spreading of fluids on powders, 68
Pharmaceutical substances
Micronization of pharmaceutical substances in a spiral jet mill, 113
Phase transformations
Two novel methods of the production of high purity tin powders with reduced oxygen content, 164

Pipe enlargement
An investigation of the flow structure through abrupt enlargement of circular pipe, 296
Plant control
A comparative experimental study of five multivariable control strategies applied to a grinding plant, 1
Plastic flow
The intrinsic cohesion of granular materials, 29
Pneumatic capsule pipeline system
Effect of traveling resistance factor on pneumatic capsule pipeline system, 227
Pneumatic conveying
An experimental study of vertical pneumatic conveying, 139
Material properties and flow modes in pneumatic conveying, 157
Attrition control by pneumatic conveying, 214
Pneumatic conveying of powders over long distances and at large capacities, 278
An investigation of the flow structure through abrupt enlargement of circular pipe, 296
Pneumatic transport systems
Optimal performance of pneumatic transport systems, 240
Porosimetry
Estimating particle size distributions from a network model of porous media, 169
Porous media
Estimating particle size distributions from a network model of porous media, 169
Powders
Two novel methods of the production of high purity tin powders with reduced oxygen content, 164
Pneumatic conveying of powders over long distances and at large capacities, 278
Pressure drop
An investigation of the flow structure through abrupt enlargement of circular pipe, 296
Pressure gradient
An experimental investigation of capsules of anomalous shape conveyed by liquid in a pipe, 207
Process control
Using mechatronics technology to assess pressure filtration, 121

Recycling
Recycling of carbon-enriched coal fly ash, 190
Rheology
Rheology of solid–liquid suspensions in reduced gravity, 151
Roughness
Role of the interface in stratified slurry flow, 221
Rubber tyre
Effect of traveling resistance factor on pneumatic capsule pipeline system, 227

Sand transport
Solids transport by laminar Newtonian flows, 269
Screw conveyors
The influence of granular vortex motion on the volumetric performance of enclosed screw conveyors, 56
Semi-autogenous grinding
Design, selection, sizing and control considerations for cyclone feed slurry pumps, 233
Shape averaging
2-D particle shape averaging and comparison using Fourier descriptors, 180
Shear-layer
Role of the interface in stratified slurry flow, 221
Slurry-flow
Role of the interface in stratified slurry flow, 221
Solid–fluid interactions
On the fully developed flow of a dense particulate mixture in a pipe, 258
Solid–liquid suspension
Rheology of solid–liquid suspensions in reduced gravity, 151
Sphere–fluid
An analytical study of the motion of a sphere rolling down a smooth inclined plane in an incompressible Newtonian fluid, 130
Spiral jet mill
Micronization of pharmaceutical substances in a spiral jet mill, 113
Spray forming
Microstructures and properties of tungsten carbide particle-reinforced high-speed composites fabricated by spray forming, 100
Static mixer
Discrete particle simulation of flow regimes in bulk solids mixing and conveying, 248
Stepped pipe
An investigation of the flow structure through abrupt enlargement of circular pipe, 296
Structured packings
Liquid film flow and area generation in structured packed columns, 84
Suspension
Analysis of microstructure of coating suspensions, 50

Tin
Two novel methods of the production of high purity tin powders with reduced oxygen content, 164
Traveling resistance factor
Effect of traveling resistance factor on pneumatic capsule pipeline system, 227
Turbulent flow
Laminar and turbulent flow experiments with yield-power law slurries, 200
Two-phase flow
An experimental study of vertical pneumatic conveying, 139

Velocity ratio
An experimental investigation of capsules of anomalous shape conveyed by liquid in a pipe, 207
Viscosity
Liquid film flow and area generation in structured packed columns, 84
Visualization
On-line monitoring of dense phase flow using real time dielectric imaging, 287
Vortex motion
The influence of granular vortex motion on the volumetric performance of enclosed screw conveyors, 56

WC particles
Microstructures and properties of tungsten carbide particle-reinforced high-speed composites fabricated by spray forming, 100
Wetted area
Liquid film flow and area generation in structured packed columns, 84
Wetting and spreading
Influence of physical and interfacial characteristics on the wetting and spreading of fluids on powders, 68

Yield-power law slurry
Laminar and turbulent flow experiments with yield-power law slurries, 200
